APPLICANT : NEC CORP;

INVENTOR : HATAKEYAMA SHIGEMITSU;

INT.CL. : H04M 3/42

TITLE : INTERNATIONAL EXCHANGE

ABSTRACT : PURPOSE: To enable a user to call fully automatically without using ground code using language by automatically translating originator's using language and transmitting the originating subscriber's will to an agent.

CONSTITUTION: When the originating subscriber 1 dials, a translation service detecting means 21 in a CPU 2 detects that the originating subscriber 1 requires translation service when international prefix is 003 or 004. Then, a language selecting means 22 selects language to be converted on the basis of a ground code. The CPU 2 specifies the language to be converted to a translating device 4, sets up a channel 31 corresponding to an international output circuit 7 in a switch 3 and reserves channels 321, 322, 33 for connecting the translating device 4 and detecting circuit 5. When a response of a terminating subscriber is detected, the CPU 2 sets up channels 321, 322, 33 and opens the channel 31 to reserve it, so that calling provided with translation service is started.
